DR WHO: BRIEF OUTLINE ONLY.

Working Title: "OPERATION: MOLE-BORE"

'Operation: Mole-Bore' is the name given to a massive exploratory drilling programme. The idea is to sink a deep bore to penetrate the earth's outer crust and tap a new source of energy, probably contained in giant pockets, a substance vaguely identified as 'Stahlman's Gas' (named after Professor Eric Stahlman, whose theory prompted the project). Site for the giant bore is somewhere in England. Time: the near future.

So important is the whole scheme that it is under the authority of the Ministry of Energy and Power. As such the security arrangements are in the hands of the Brigadier and his UNIT force.

As we open our story Mole-Bore has already gone deeper than any drill-hole before. But conventional drilling methods are useless in an operation of this size. A new technique has been perfected and a vast power source is transmitted to the drill-bit from a nuclear reactor situated close to the rig. There's also a complex computer continually translating data and monitoring the progress of the bore.

The Director of Operations is a benign Ministry-man called Sir Keith Mulvaney - and the Technical Director (almost on a par as far as authority is concerned) is Professor Eric Stahlman himself, a vain, brilliant but psychopathically ambitious genius. There is friction between these two. Seconded to the staff, in official and unofficial capacities, are many of the finest technical brains in the country - amongst them, as an advisor, is the Doctor.

But he and Liz have only a passing interest in the project. The Doctor is far more concerned with his work on the Tardis. However, his involvement suits his own purpose well. He needs to tap the nuclear reactor's power output to activate some important components of the Tardis. (Note: He might be working on the 'control console' of the Tardis, which he's transported to a shed close to the reactor and the drill-rig. Only the console itself: the main Tardis interior set need not be used.)

The drilling operation moves into its last crucial stage. Within the next few days the crust will be penetrated.

In the meantime, the Doctor, unknown to Liz, or anyone else, has managed to lay a power cable from the reactor to the console. It is connected up. He switches on the power. There is a blinding flash - and the Doctor is hurled back. The console goes mad - the whole shed seems to spin and the Doctor loses consciousness for a few moments. Then things settle down and the Doctor recovers his senses. The console appears undamaged, but flickering lights show that it is (or has been) activated. The Doctor is anxious to find out if anyone heard or witnessed the rumpus in the shed. He goes outside.

At first sight everything appears to be normal. Then, as he walks over towards the Central Control Area - he is challenged by a UNIT security sentry. The Doctor, in his usual way, is too preoccupied to pay much attention. But to his astonishment the sentry opens fire on him.

The Doctor has to run for his life. The alarm sirens wail out. To the Doctor this seems ridiculous - after all, he does have a security clearance from the Brigadier himself. Eventually the indignant Doctor is captured and brought before the Brigadier. And now things go haywire. The Doctor is shocked and puzzled to find that the Brigadier doesn't recognise him - neither does his own assistant, Liz! Furthermore, there is something wrong not only with the Brigadier's appearance - but with other things, too. There are subtle differences in people's clothing, the UNIT soldiers are now wearing a sort of Nazi type uniform and the Brigadier looks more like an S.S. Officer than anything else. Hair styles, and/or hair colour are different. Official notices in the Control Area are still written in English - but in a phonetic alphabet. And the bombastic Professor Stahlman seems to be in complete control of 'Operation: Mole-Bore'.

The Doctor deduces what has happened. The newly activated console from the Tardis has projected him into a 'parallel warp' - an identical world, similar in many respects to Earth, but perhaps millions of galaxies away. The pattern of Earth behaviour, history and progress have been duplicated. But the Doctor is stuck - and because he himself is a paradox, he has no duplicate here on Earth Mark Two.

In the meantime, Earth II's own Mole-Bore is progressing rapidly, regardless of some rather disquieting information being transmitted by the computer. But England is a much more totalitarian state in this 'warp'. The social structure is dictatorial - and Professor Stahlman II is all-powerful.

Until the Doctor's identity can be checked by the Brigadier II he is held in the Control Area II as a prisoner. He is not even allowed to return to the shed where the Tardis console stands. Nevertheless, he clashes violently with Professor Stahlman II - for without the Tardis to distract him the Doctor begins to take an intense interest in the giant boring operation. Collating the information from the computer and analysing it, the Doctor begins to suspect that there is a terrible danger in this whole project - a danger that must be duplicated in the world he has just come from. But Professor Stahlman II orders the drilling programme to be intensified - maintaining that the degree of risk is only slight, even though no one knows for certain what will happen or what they will find when the 'Mohorovicic discontinuity' (the strata directly beneath the Earth's crust) is penetrated. Stahlman II even goes so far as to sabotage the computer - so that nothing will distract the progress of Mole-Bore II.

T
Tension mounts as the moment of final penetration approaches. The Doctor tries to escape - and even manages to get free for a while - but is soon recaptured. He implores the Brigadier II and Liz II to heed his warning - but all to no avail.

Then, finally, the drilling-bit bites through into the 'Mohorovicic discontinuity' - and suddenly there is a terrific explosion at the rig head. The safety cocks and valves disintegrate as a scorching jet shoots up from the bore hole high into the air. All attempts to plug up the shaft meet with instant disaster. All instruments in the Control Area register extreme danger. Mole-Bore II is an exhaust for 'Stahlman's Gas' - a vicious stream of super-heated vapour which will rapidly displace Earth II's temperate climate. The bore itself has been distended into a fissure and the stuff pours out, the intensity and the pressure increasing by the minute.

Now the Doctor is fully aware of the ultimate danger. The temperature of the Earth II's surface and the surrounding air - will rise. In a relatively short space of time every living thing will shrivel and die. And the Doctor knows that this same catastrophe will attend the other Mole-Bore operation on the 'other' world - unless he can somehow get back and warn them.

This is the Doomsday as far as Earth II is concerned. Even now the temperature in the immediate vicinity has climbed alarmingly. Panic grips everyone as the extent of the emergency is made public.

In the confusion the Doctor makes for the shed - and his precious console. The nuclear reactor is still functioning - but only just. Everything is being affected by the heat. Once more he connects the console up to the giant power source - but as he does, the reactor starts to break down and the power begins to fail. The Doctor has visions of being stranded and thus unable to warn those of the 'other' world.

Then he remembers that there is one other power source which shows no signs of decreasing - the super-heated gas coming up from the bowels of Earth II through the bore hole. Here is a source of energy even greater than that transmitted from the reactor.

But the Doctor needs help. He has to go back through the ever increasing disaster area and find some way of tapping the 'gusher'. Desperately he tries to explain the situation to Brigadier II and Liz II. Finally, he convinces them. The three of them, working in terrifyingly dangerous conditions and with time against them - ultimately succeed in getting power to the console... The lights flicker, the dials are activated, the shed seems to spin, the Doctor is flung backwards and loses consciousness...

He wakes again, still in the shed, but the sounds of panic and confusion outside have gone. He goes out. Things are back to normal - the rig is functioning smoothly and there is the usual, ordered activity about the place. A nearby UNIT sentry (now in his usual uniform), a duplicate of the one on Earth II who shot at him, gives the Doctor a friendly wave of recognition - much to the latter's relief.

There has been virtually no time lapse. His journey to Earth II has taken only the few minutes that he has been rendered unconscious. He might even believe that the whole thing has been some dreamlike figment of his imagination - except that a vital component from Mole-Bore II's sabotaged computer (a micro-circuit), which he'd salvaged earlier, has made the journey back with him, in his pocket. The ultimate destruction of Earth (I & II) is a reality'.

Now the Doctor knows that he must warn Stahlman, Sir Keith Mulvaney, the Brigadier and Liz of the dangers of continuing with Mole-Bore. Only the Doctor knows exactly the consequences of tapping the 'Mohorovicic discontinuity'. He explains the whole situation to them - but Professor Stahlman has become the project's supreme authority. Sir Keith has been demoted. Stahlman, naturally, disbelieves the Doctor's wild story of a duplicate world. How can he have made such a fantastic and impossible journey, he asks, within the space of a few minutes ?

Unable to get official action - the Doctor becomes desperate. He realises that the only course open to him is to sabotage Operation: Mole-Bore. And he attempts to do just that. But he is discovered by the authorities and put under arrest.

To his horror he now sees that the pattern of events are now running absolutely parallel to those on Earth II. The drilling programme is intensified, Stahlman will brook no interference from anyone, the Doctor is a prisoner and the computer now begins to transmit disquietening information. And Stahlman sabotages the computer... The whole thing is happening all over again - but this time the Doctor knows the dreadful outcome.

Once more the Doctor escapes - just as he did before - but this time he has an immediate ally in Liz. The Brigadier is ordered to recapture him by Stahlman - and there is yet another exciting chase sequence, duplicating the one on Earth II.

In the meantime, H-Hour (the moment when the drill will penetrate the 'Mohorovicic discontinuity') approaches rapidly. All systems are 'Go'. Everyone waits excitedly.

The Doctor reaches the computer and manages to substitute the component destroyed by Stahlman for the one brought back from Earth II - and the machine starts functioning again. The information it transmits now is an urgent warning alert - yet the time for penetration is only minutes away! The Doctor cannot convince Stahlman to stop drilling.

In the last desperate gamble the Doctor seemingly goes beserk. Unable to get anywhere near the rig head, he makes, instead, for the nuclear reactor - and causes the gigantic machine to double its power output. This could either speed up the drilling mechanism - or 'blow' the whole works. Fortunately, it does the latter - right at the moment of the last countdown before penetration. In fact, a thin trickle of the scorching gas might even be seeping up the bore...

All hell breaks loose in the Control Area - but the Doctor is vindicated. The information still being processed by the computer and an analysis of the trickle of 'Stahlman's Gas', proves, without any shadow of a doubt, that there is a terrible danger in breaking the earth's crust. Stahlman is discredited - and the catastrophe averted. The Mole-Bore must be filled up and sealed. Perhaps one day, when scientific techniques are even more sophisticated, the hole may be opened up again and the super-energy tapped for the benefit of Mankind.

* * *

The above is only the briefest of outlines. Many of the facets of the story would be explored in much greater depth. The duplication of events before the drilling is stopped by the Doctor would be much more vivid and exciting in script form.

Note: it is estimated that the Mohorovicic Discontinuity is some twenty miles beneath the earth's surface around England. The Mole-Bore drill would have to go that deep. Experts tell me that conventional drilling methods would be useless - no drilling rod could take the strain. Instead the drill-bit would be a separate unit on its own - powered by enormously long cables reaching down into the hole. From our point of view this makes the actual rig much simpler, visually.

The deepest man-made bore at this time is the Phillips Petroleum Test Well in Pecos County, Texas, reaching 25,340 ft (4.80 miles beneath the earth's surface. However, it is believed that the American Mohole Project bore has exceeded this. It is also thought that the Russian 'Project Anti-Cosmos' hole near the Finnish border at Karelia is now deeper than 5.50 miles. It is impossible to get any information about these two operations.

Don Houghton, November 1969.

MEHMET II (1432-1481), called THE CONQUEROR, was the seventh ruler of the Ottoman sultanate in Constantinople (now Istanbul). He transformed the Byzantine Empire to an end of the world. His armies also won Serbia, Bulgaria, and other areas of southeast Europe, Greece, and the Black Sea regions. He became sultan in 1451 after the death of his father. He reorganized the Ottoman Empire and established the Palace School for the training of officials. He also built the Seraglio, a large mosque, or Muslim temple, and several colleges, and many charitable institutions.

MOHAWK INDIANS. See IROQUOIS INDIANS.

MOHAWK RIVER is the largest branch of the Hudson River. It connects the Hudson Valley with the plains of the Great Lakes region. The Mohawk was named for the Mohawk Indians, who once lived in this region. It flows north from southern New York and flows south-

The river rises in northern New York and flows eastward for 148 miles. It enters the Hudson at Catskills, about 10 miles north of Albany. The river winds through dairy-farm lands and large industrial centers.

The Mohawk Valley was the headquarters of a confederacy of Iroquois tribes.

LOYAL DURAND, JR.

MOHAWK TRAIL was a route westward along the Mohawk River from the Hudson River to the Great Lakes. The Iroquois Indian confederacy occupied the land it crossed. In pioneer days, thousands of settlers traveled westward along this route. Its importance declined after the building of the Erie Canal in 1825. The New York Central Railroad and a modern highway now follow the course of the trail. **W. TORRENTINE JACOBSON**

MOHICAN INDIANS, *moh·HEE kun*, is the name often given to two separate but related tribes of the eastern United States. One group, properly called the *Mahican*, lived along the Hudson River in New York state. The other tribe, the *Mohagan*, settled in Connecticut. James Fenimore Cooper's novel, *The Last of the Mohicans*, discusses the customs of the *Mohagan*. They broke off from the Pequot tribe, and formed one of the most powerful Indian groups in New England. Their chief Uncas remained friendly to the colonists, but the other Indians hated him and accused him of treachery (see UNCAS). Both groups lived like other tribes of the area (see INDIAN, AMERICAN [Eastern Forest Indians]).

After the coming of the white men, most Mahican moved westward to Wisconsin and lost their tribal identity. A few Mohegan, who have mixed with whites, still live in Mohegan, Conn.

MOHOLE is a project conducted by U.S. scientists to drill a hole more than 3 miles into the earth. The scientists plan to bring up samples of the earth that man has never seen before. By studying these samples, they hope to solve some of the mysteries about the interior of the earth. The Mohole project ranks as one of the most important in the history of geology. In 1961, scientists and engineers drilled test holes at two ocean sites. They scheduled the start of Mohole drilling for 1964 or 1965.

The goal of the project is to drill entirely through the earth's crust into the mantle. The crust is the top layer of the earth. The mantle, or second layer, lies just below the crust. The boundary between the crust and mantle is called the *Mohorovičić discontinuity* (pronounced *mo ho roh oh chun ee ty*). The name of the boundary is often shortened to the *Moho*. And so Mohorovičić (1857-1936) — a Yugoslav geophysicist, discovered the *Moho* in 1909 from studies of earthquake records. The scientists plan to drill a hole past the *Moho*, and this hole is called the *Mohole*.

Geologists estimate that the earth's crust has an average thickness of 20 miles under land, and about 5 miles under oceans. Mohole scientists plan to drill under the ocean where the crust is thinner than average.

The crust under the ocean consists of a layer of *basalt* (a hard rock) covered by a layer of *sediment*. *Sediment* is a mudlike material composed of clay, silt, and *fossil tests* (shells) of animals and plants. It is easy to drill through, and the fossils provide clues about ocean history for the last few hundred million years.

Scientists know that the mantle makes up *four-fifths* of the earth's volume. But the *extension* of the mantle is uncertain because no one has seen a sample of it. Samples of the mantle could be analyzed for composition, radioactivity, density, and other data. Measurements of radioactivity, for example, may tell how old the earth is and whether it is cooling. Geologists plan to lower instruments into the Mohole to record temperature, magnetism, and other vital information. The equipment and methods developed from this work may someday be used to recover valuable minerals from beneath the ocean floor.

The American Miscellaneous Society (AMSOC) proposed the project in 1957. The society, formed in 1952, later became the AMSOC committee of the National Academy of Sciences. Project Mohole is conducted by the Academy and the National Research Council. The National Science Foundation, an agency of the United States government, sponsors the project.

Test Drilling. In 1961, Mohole scientists and engineers conducted tests at two ocean sites. They drilled into the ocean floor from *CUSS I*, a drill ship converted from a navy freight barge. *CUSS I* was equipped with a derrick especially designed to withstand the rolling of the ship.

The first site lay in the San Diego Bay, Pacific Ocean, near La Jolla, Calif. The second site chiefly to experiment with deep-sea drilling techniques. The engineers drilled five holes under 11,672 feet of water. The deepest hole went 1,035 feet to the ocean floor. The engineers obtained *sediment*, and solved many drilling problems.

The second site was about 40 miles east of Guadalupe Island. This island lies in the Pacific, about 180 miles west of northern Mexico. Engineers drilled five holes under 11,672 feet of water. The deepest hole went down 601 feet below the ocean floor. It penetrated about 44 feet of basalt. This was the first time that man had ever drilled into the basalt layer of the earth's crust. Scientists found that the basalt had a composition similar to that of basalt recovered from volcanoes in Hawaii. The sediment taken from about 350 feet below the ocean floor contained fossils from the Miocene Age, about 20,000,000 years ago.

Mohole scientists scheduled 1962 tests at two *land* sites. The proposed sites were in Puerto Rico and St. Paul's Rock in the South Atlantic Ocean, about 600 miles northeast of the eastern tip of Brazil. Geologists also continued to search the oceans for a suitable spot to drill the actual Mohole.

Drilling Equipment. For the Mohole tests, engineers developed many new techniques in underwater drilling. They based their methods on those developed by men for offshore petroleum drilling (see *PETROLEUM* (picture, Drilling for Offshore Oil)). However, the much deeper water at the test sites required some new drilling methods. One problem was to keep the ship above the drilling hole in water too deep for anchoring. Another problem was to drill with a pipe, more than 12,000

feet long. This was an *extension* of

the top of a *drill*

11th December 1969

Dear Mr. Hunt,

RE: "NO-HOLE PROJECT" - STORYLINE

We should like to commission you to write a storyline for a possible 7 x 24 minute television serial called "NO-HOLE PROJECT" to be delivered by 19th December 1969.

I should like to offer him a fee of £ for this storyline, payable half now and half on delivery. If we decide to commission the full serial I suggest a fee of £ per episode (the £ already paid to be deducted from episode 1).

Please let me know whether you can agree.

Yours sincerely,

(Ben Travers)
Assistant Head of Copyright

Thank you for finding time to meet on Friday to discuss alternative recording arrangements for 25' Serials.

I hope to take the meeting in two parts:

- a) Examination of the principles that would apply to fortnightly two-studio-day recordings of 50', to be edited subsequently into two 25' episodes.
- b) Assuming that a) produces a satisfactory agreement in Production and Servicing terms we should then consider particular titles with a view to seeing how soon we could start, and what disturbance this might cause to other studio plans.

Dear Mrs. Hunt,

DON HOUGHTON : DR. WHO & THE MO-HOLE PROJECT

We should like to commission Don Houghton to write a television serial in 7 x 24 minute episodes called DR. WHO AND THE MO-HOLE PROJECT, for delivery by 27th February, based on the format and characters provided.

We have agreed a fee of £ each episode (less £ already paid to be deducted from Episode 1) on the terms of the new Guild Series C agreement which came into force on 1st January and is being printed.

Would you please sign and return one copy of this letter and I will then authorise the payment for Episode 1. I will send you the agreement for signature as soon as possible.

Yours sincerely,

(Ben Travers)

DON HOUGHTON

Tel:

My Dear Terrance,

As you suggested, I've made Episode 2 much thicker. It runs to 32 pages. Consequently I'm sure it will run overlength.

I've incorporated the points you relayed to me on the telephone: the Doctor's fight with the soldier, the confrontation between Stahlman and the Doctor - and the latter's 'karate' bit, etc. They've all slipped in nicely, I think, but I did have to do a bit of juggling, as might be expected. The Doctor-Stahlman confrontation, for example: his accusation of Stahlman's sabotage of the computer could not be made in Central Control where others might witness it - otherwise suspicion would immediately fall on the Professor when the machine broke down. So I've taken them both into the Brigadier's office - which means that we know what Stahlman has done - but, at this stage, nobody else does. The fight between the Doctor and the soldier follows the crisis in the Main Switch Room of the Nuclear Reactor - it therefore underlines, quite nicely, I think, the action that has gone before.

There's more dialogue in this ep: I found this necessary because we are now getting deeper into the story and there's a lot of plotting to do at this stage. Apart from that, I have tried to give the characters more definition - so that when the Doctor gets into 'warp II' there'll be much more interest in the 'duplicate' people. Nevertheless, I think you'll find the dialogue moves along and should hold interest. I took particular care with the Doctor's dialogue and I hope you'll find him emerging as you want. I find him much sharper now.

Do hope the Ep meets with your approval. Look forward immensely to getting on with Ep 3. Let me know if you want anything altered, cut or changed and - as always - feel free to make any alterations you think fit.

Cheers,

Don H.

Subject: SERIALS RECORDING ARRANGEMENTS 6th February, 1976
To: Manager Studio Operations,
Asst. to H.S.M.(I)
Organiser Serials,
Larry Letts (Producer, Dr Who)
John McCrae (Producer Black Tulip)
A/A.E.I.C. Studio Engineering
Asst. Scenic Design Manager
Chief Asst. (Drama) to H.Sc.Des.
Asst. (Vision Training) to H.T.O.Tel.S.
A/Asst. (Production) (Miss Wright)

H. Serials has asked that we re-examine the recording arrangements for Dr Who DDD and Black Tulip. At the same time it seems sensible to anticipate redording arrangements for Little Women.

The particular worries relate to the loss of camera time. I shall be asking for guidance on how to achieve a 1300 start and, giving the studio plans now known, the possibility of a 1930-2230 recording session.

I shall be grateful if all concerned would try to anticipate the problems to be discussed by familiarising themselves with design intentions to the extent that they affect the issue, and to the extent that they are known.

I will call a meeting as urgently as I can.

DR. WHO 'DDD': V.T. EDITING

Date: 12th February 1970

Recording Clerk

Copy to: Barry Letts; ✓
Douglas Camfield;
C. D'Oyly-John.

May I please book Electronic editing with a DR 90 for this serial as follows:

Episodes 1 & 2: 1100 - 1830 on 27th and 28th April (Wk. 17)

Episodes 3 & 4: 1100 - 1830 on 11th and 12th May (Wk. 19)

Episodes 5 & 6: 1100 - 2130 on 24th May (Wk. 21)

Episodes 6 & 7: 1100 - 2130 on 31st May (Wk. 22).

We shall be recording 2 episodes on the same Studio day which will obviously involve more preparation by the Production team. I would therefore be grateful if you could alter these dates as little as possible, especially as the booking has been requested so far in advance. Thank you.

Notes on a Meeting held in Room 21/7 T.C.
on 12th January to discuss the working
arrangements for 2 day Drama Serials

Present: P.A. (Studies) (In the chair)
Manager Studio Operations
A/Asst. (Production) (Jeannette Wright)
Asst. (Production) I
Asst. (Vision Training) to H.T.O.Tel.S.
A/Asst. P.A. (Studies)
A/A.E.I.C. Studio Engineering
Chief Asst. (Drama) to H.Sc.Des.
Asst. S.D.M.
Barry Letts
John Monae
Peter Kindred
Org. Drama Serials
Paddy Russell
Asst. Studio Management.

1. An earlier meeting, on Friday 16th January, had agreed experimental arrangements in principle for recording 25' Serials on a fortnightly strike, producing two episodes in two successive days.
2. Serials Department had expressed concern at the loss of camera time and were requesting an arrangement which would give, at least, a 1300 start and a recording time of 19.30 to 22.30.

Though 22.30 finishes are normally not accepted as a basis for advance planning, for logistic reasons, Manager Studio Operations agreed to examine the possibility in the light of available information. To the extent that 22.30 finishes proved to be possible, making the arrangements acceptable to Serials Department, this would permit the experiment to proceed.

3. Detailed arrangements for Dr Who DDD, Black Tulip and Little Women were examined as follows:

Dr Who DDD: Barry Letts itemised the likely sets and handling weight: agreed that:

- a) Week 16: 1130 hrs rehearsal on 1st day and 2230 hrs finish on day 2 would be possible provided that the sets did not escalate: noted that TC.3 empty on the Saturday of Week 17.
- b) Week 18: An 1100 hrs rehearsal on the 1st day and a 2230 hrs finish on the 2nd day would be possible.
- c) Week 20: Due to studio planning difficulties it was agreed to record one episode per day. Rehearsal on the 1st day will be at 1100 and on the 2nd day 1030. Recording will be 2030-2200 on both days. No overnight change planned.
- d) Week 21: Rehearsal at 1030 record 2030-2200 agreed. This is a one day stand.

cont/.....

Black Tulp:-

- a) Week 15: a 1300 hrs rehearsal was thought likely but could not be guaranteed until plans were made available to Manager Studio Operations. a 2230 finish on the 2nd day is possible.
- b) Week 17: Due to handling weight being heavier than the previous recording it was felt that a 1300 start might be possible if on the previous day, TC.7 and TC.3 were switched. Again no guarantee given in the absence of plans. Although a 2230 finish was agreed Manager Studio Operations reserved the right to ask for a review of the whole night.

Later "Chat Show" Week 18 is cancelled and "Review" moved from TC.3 to TC.7 thus reducing the pressures on this night.

Week 19: After moving "Troubleshooters" from TC.6 to TC.3 and "Black Tulp" from TC.3 to TC.6 a 1300 hrs rehearsal and a 2230 hrs finish were agreed.

Little Women: After lengthy discussion it was agreed that we would record 2 episode per day. Rehearsal at 1140 hrs on the 1st day and 1030 hrs on the 2nd day. Recording on both days 2030-2200.

Week 22: Move to TC.6 with "L.C. T.B.A." moved to TC.8.

Week 24-29: Agreed.

All the above timings are agreed subject to plans being made available and that no increase in studio turn-round time would be asked for.

Production and Design Departments agreed to keep the sets to manageable proportions and Programme Planning will liaise with both Studio Management and Scenic Servicing on any bids for studios which would significantly affect the above plans.

H.Sc.Des.Tel.,
H.E.Tel.Studios,
H.P.(F)., P.H.(C)

At Tuesday's meeting I propose discussing, in this order:

- a) A definition of "D-Sized-Productions" for large studios (Organiser Serials and Bazzy Letts will be attending for this part of the meeting).
- b) A "medium" definition for productions in large studios not covered by a) above.
- c) A possible definition for use of 'T.C.' which we can recommend to A.C.(P.P.)Tel. and C.P.S.Tel.

(J.S.C. Williams)

From: P.A. (Stallan) 6055 P.O. P.M.C.
Subject: 2 DAY DRAMA SERIALS 17th February, 1970
To: To Recipients of Minutes of meeting held on 12.2.70

The recording arrangements detailed in the attached minutes are now incorporated in studio plans. I should be grateful, therefore, for your earliest reaction to any points of doubt arising out of the minutes.

There is one point that could, perhaps, have been made clearer in the minutes: I refer to the obvious need for continuous consultation between interested parties during the course of the experiment. In this way we shall be able to monitor progress and review the operation in respect of future planning.

1130 hrs rehearsal

Anthony S.
(J.S.C. Williams)

As recorded in the minutes of the meeting held on 12th February
for 2 day Drama Serials.

Recording Arrangements for 25' Serials

Minutes of Meeting held on Friday 16th January
at 10.30 a.m. in Room 7034 T.C.

Present: P.A. (Studios) (In the chair)
Harry Lettis (Producer, Dr Who)
John McGee (Producer, Black Tulip)
Manager, Studio Operations
Assistant to H.S.M. (I)
Organiser, Serials
A/A.E.I.C. Studio Engineering
Asst. Scenic Design Manager
Asst. (Vision Training) to H.T.O.Tel.S.
A/Asst. (Production) (Miss Wright)

The meeting met to consider various proposals that that a preferred way of producing 25' serials would be to record two episodes within two successive studio days on a fortnightly strike.

The attached paper, prepared by Assistant to H.S.M.(I) had been circulated to members before the meeting. Agreed a) that this represented a most helpful analysis of the servicing implications, b) that the conclusion of overall benefits in servicing terms were sound.

Particular servicing points arising out of the paper and general discussion were:

- a) Anticipation of the recording pattern is required to enable studios to be planned for particular titles and so that scripts could be written with a view to assuring reasonable continuity of sets between the two episodes being paired.
- b) Arising out of a), agreed that action should not, if possible, be designed for different parts of the same set in subsequent episodes of a 'pair'; otherwise lighting facilities would be exhausted and require re-rigging, thus losing studio time.
- c) Despite a), the pairing arrangement could, nevertheless, require more sets than for single episodes: since all sets would be required for the first day a start time of 1400 should be anticipated.
- d) An earlier start would permit significantly fewer or more simple sets and should not be anticipated without the prior agreement of Scenic Servicing.

An 1100 start, for example, would require all sets to be capable of being set within studio D's area).

- e) When two 25' serials are planned concurrently, the 'saving' in planning terms represented an exchange of two 10.30 starts following overnight changes, for one 1400 start within the week.

cont/.....

Recording Times: Two main alternatives were discussed

- a) First day, rehearse 1400 to 2200 (less meal break).
Second day, rehearse 10.30, and record for three hours at 1930 to 2230. Agreed that since a 2230 finish could not be guaranteed, and that extra editing could result from this arrangement, that this would be an unsafe plan.
- b) First day: rehearse 1400 to 2200 (less meal breaks)
Second day:
- | | |
|-------------------|---------------|
| Rehearse | 10.30 - 13.00 |
| lunch and line-up | 13.00 - 14.30 |
| Record | 14.30 - 16.00 |
| Tea | 16.00 - 16.30 |
| Rehearse | 16.30 - 19.00 |
| Dinner/line-up | 19.00 - 20.30 |
| Record | 20.30 - 22.00 |

This was agreed as being an acceptable timetable. Noted that it represented a net $1\frac{1}{2}$ hour less studio time per episode than present (10.30 start) practice, but considered advantageous in respect of continuity and improved probability of scheduled start times, reduced interruptions, etc.

Other points noted

- a) The 'savings' to Servicing Departments were not capable of reflection in the P.S.E., where an extra £100 per episode might result in respect of artists' fees.
- b) Artists were expected to prefer the arrangement in that it would relieve the pressure resulting from a weekly strike and enable a rhythm to be established between each of a pair of recordings (and perhaps the extra cash?)
- c) It was considered unlikely that time would permit use of editors during recording.

Dr Who DDD and Black Tullip

Noted that this pattern would be acceptable:

Black Tullip; Week 15, 17 and 19, Thursdays and Fridays for a total of six episodes.

Dr Who DDD; Week 16, 18, 20, Thursdays and Friday, and Thursday of Week 21 for a total of seven episodes.

This pattern required a re-arrangement of studio plans to provide pairs of adjacent days.

ACTION: P.A. (Studios)

Subsequent Serials

Organiser Serials advised that a similar arrangement would be advantageous to Little Women, Silver Sword and The Viaduct. P.A. (Studios) undertook to examine the possibility though these serials were not, at present, planned to record concurrently.

ADVENTURE THRILLER

BRIEF OUTLINE OF PLOT:

(Information in brackets NOT FOR PUBLICATION)

The Doctor attends a top secret drilling project, the purpose of which is to penetrate the Earth's crust and tap the new energy source of Stahlman's Gas which Professor Stahlman, instigator of the project, believes to lie below. Stahlman, a ruthless egomaniac is at odds with Sir Keith Gold, Executive Director of the project, who urges a more cautious approach to the drilling.

Beneath his pose of interested observer, the Doctor is anxious to tap the nuclear power of the project as part of his plan to get the grounded Tardis operational once more. His attempt to do this projects him into a parallel world, a semi-fascist Britain in which he meets a very different Liz and Brigadier. In this world too the Project Inferno is nearing completion as the penetration of the Earth's crust unleashes primitive forces that will eventually destroy this parallel world - first the terrifying Primords - men degenerated by the released Stahlman's gas, into a kind of primaeval ape - then an immense volcanic eruption that will eventually destroy the planet. Before the final catastrophe the Doctor manages to project himself back into 'our' world, where to his horror he finds that the Project Inferno is nearing the final stage under the ruthless driving of Professor Stahlman.

Desperately the Doctor struggles to prevent a repetition of the catastrophe which has destroyed the strange parallel world.

For the attention of Mr. _____.

Dear Sirs,

"Dr. Who."

I understand from our director, Douglas Camfield, that you are very kindly granting us filming facilities on your premises from 1st April 1970 to 3rd April, 1970 in connection with the above programme.

We should like to offer you a payment of _____ as a token of our appreciation and on the understanding that the rights in these facilities for any recordings or programmes made by the BBC will vest in the BBC. If this offer is acceptable, will you please sign and return the enclosed copy of this letter, indicating to whom the cheque should be made payable.

This is also to confirm that the British Broadcasting Corporation will be responsible for all legal claims for personal injury and damage to property due to its negligence or that of its servants or agents arising directly out of the activities in connection with this filming.

Thank you for your co-operation in this matter.

Yours faithfully,

Jennie Betts
Assistant, Facilities & General,
Television Administration.

I agree to a payment of _____ as outlined above. The cheque should be made payable to

DRAFT MINUTES OF MEETING TO DISCUSS USE OF LARGE STUDIOS BY
'MEDIUM' PRODUCTIONS
P.A. (Studios)

Copies to: A. to H.S.M.Tel.(I); Barry Letts; C.A.(Drama) to
H.S.D.; C.A.(Gen.) to H.S.D.; Senior Vision Manager;
Drama Serials Organiser; A/A.P.A. (Studios)

May I suggest the following amendments to your list:

4. Large scenery/handling content, including keep-sets from previous episodes. ("High" could be confused with height.)
7. Should read "Overpieces e.g. soffits, ceiling pieces, lintels etc. which require special lighting and are normally very time-consuming to rig.
8. Should read "Specially rigged cloths, cycloramas hung from bars etc.

Finally, there is no mention in the list of Special Effects work (Jack Kinery) which can normally only be done after setting is completed and is never undertaken during the night, nor, to the best of my knowledge, are water and gas practicals. I do not remember if the meeting discussed these, but it might be sensible to add them to the list.

DR. WHO 'DDD': V.T. DUBBING.

Recording Clerk

Copy to: Barry Letts;
Douglas Camfield;
Christopher D'Oyly-John;
Miss Marion Gates;

May I please book 2 V.T. machines for dubbing on the following dates:-

1.5.70: 1800-2200 for Episode 1.

4.5.70: 1800-2200 for Episode 2.

15.5.70: 1800-2200 for Episode 3.

18.5.70: 1800-2200 for Episode 4.

1.6.70: 1030-2130 for Episodes 5, & 6.

4.6.70: 1800-2200 for Episode 7.

Studio R. has been booked for these sessions and the dates have been carefully worked out to fit into a very tight production schedule, because of the new recording pattern for DR. WHO.

I would therefore be grateful if they were not altered as the Director is not available at any other time. Thank you.

K. Collier
(Karilyn Collier)

FROM: Asst. Scenic Design Manager, Television
330 Scenery Block, TC: PABX:

13th March, 1970

SUBJECT: DR. WHO (DND) - Man Hour Allocation

TO: P. Assistant (P.A.)

copies to: A/Planning Assistant
DL. Organiser
Barry Lettis
Douglas Camfield
Construction Org.
Asst. Man. Studio Ops.
Asst. (1) to H.S.M. Tol.
Jeremy Davies
Allan Thomson

The designer of the above serial has not been able to do his re-allocation of man hours over the seven episodes and they are as follows:-

	<u>Allocation</u>	<u>Required</u>
Location Filming, Week 13 } construction	Nil	72
Stage Filming, Week 14 } Week 12	500	1000
Episodes 1 & 2 - Thursday/Friday, Wk. 16	1415	2025
Episodes 3 & 4 - Thursday/Friday, Wk. 18	830	125
Episodes 5 & 6 - Thursday/Friday, Wk. 20	830	50
Episode 7 - Thursday, Wk. 21	415	25
	<u>3990</u>	<u>3297</u>

At the moment there is a saving of 693 man hours over the whole serial.

I understand from the designer that Asst. Manager, Studio Operations has seen all the rough plans for this serial and has agreed these from the security handling point of view. Also a considerable amount of the effort in Weeks 14 and 16 is made up of specialist contract effort and Construction Organiser can handle the remaining extra man hours.

May we have your approval of this re-allocation, please?

Minutes of Meeting held at 12.10 on Monday 24th February 1970, in Room D.010

Present: P.A. (Studios) (In the chair)
Manager (Studio Operations)
Harry Letts
Chief Assistant (Drama) to H.So.Des.
Chief Assistant (General) to H.So.Des.
Senior Vision Manager
Assistant to H.S.I.I.
Drama Serials Organiser (part-time)
A/A.P.A. Studios.

1. The purpose of the meeting was to define the method of using large studios by productions which had previously been confined to 'small' or 'medium' studios. The need for a definition arose because one of the five large T.C. studios is required, for staffing and security-handling reasons, to be used at least from its maximum working area. The ability to 'pace' four large areas from the five available has emphasised the need for a clear distinction between 'large', 'medium' and 'small' studio use.
2. A separate need for definition existed in respect of 21' serials which had previously been produced in studios D or G (when monochrome). In transfer to large T.C. studios for colour production these programmes had been requested to design 'as for Studio D' to ensure the necessary 10.30/11.00 start to camera rehearsal, though the sets could then be expanded to permit improved camera positioning. The 'Studio-D-sized' definition had proved capable of widely varying interpretations: an interpretation which required the programme design to be capable of production in Studio D would be unwelcome to Serials Department; a definition which simply required that the sets could be stood in D would easily provide scenery of a volume or complexity that could not be set in a large studio for an early start.

'Small' Productions

Productions such as *Fun Alive*, *Face* or *Levy* (which could use PC.7) will be designed to confine all camera movement and scenery within an area of 3,000 sq. feet, i.e. up to line 44 from either end of the studio.

'Medium' Productions

Productions such as *Blue Peter*, which have normally used D, G or L2.. will be required to not exceed line 44 for use of a medium-sized or floor painting, though camera movement could use additional space as required.

Studio-D-Sized Productions

Available ways of arriving at a meaningful definition were discussed unconvincingly. It was agreed that it is impracticable to test such designs to see if it will, in practice, be capable of being set in D, nor is it reasonable or practicable for Serials Services to provide exceptional examinations of such designs to ensure feasibility.

cont/.....

Partly for these reasons the meeting could not formulate a definition which could be applied with any prospect of success. Nevertheless, since responsibility for matching editorial and design intention with the facilities available rests with the producer and director, it was thought useful to provide a list of design characteristics affecting the probability of an early start to camera rehearsal for a 25' serial, whether produced as a weekly one-day stand, or on a fortnightly two-day stand.

Subsequent discussion provided the attached list of guidelines.

Agreed that the list could be a guide only and not mandatory.

The need for promulgation to designers was agreed.

Production of 25' Serials

Production of 25' Serials on a one-day stand or on a fortnightly two-day stand in large studios poses particular problems for Scenic Servicing and Lighting Departments in order to provide an early start to camera rehearsal.

The following is a list of the design characteristics that, if present, can reduce the possibility of an early start:

1. Total floor painting exceeding 2,000 square feet.
2. Significant over-painting to achieve patterns, since this incurs double or treble drying time prior to setting scenery.
3. All or most of the painting required to be completed before scenery is set.
4. Large scenery/handling content, including keep-sets from previous episodes.
5. Scaffolding (advisable to check with Scenic Servicing or Studio Management that this is feasible).
6. Scenery exceeding 12 feet in height, therefore requiring extra bracing.
7. Overpieces, e.g. soffits, ceiling pieces, lintels etc. (which usually require special lighting and are time-consuming to rig).
8. Ambitious or complicated use of cloths which require to be specially rigged.
9. Large or complicated areas of clad rostra.
10. A total setting area (excluding camera positions) exceeding 2,500 sq. feet (the number of sets could be a factor six sets of, say, 400 sq. feet each, being a reasonable average).
11. Greenery (which requires the presence of the designer), other than backings to windows etc.
12. Extensive use of special effects or practicals can require extra lighting or setting time. Scenic Servicing or Lighting Departments can advise.

Please note that this list is not mandatory, but non-observance can reduce the prospect of an early start to rehearsal.

Use of Large Studios by 'Medium' Productions

Minutes of Meeting held at 10.30 on Tuesday 24th February 1970, in Room N.055

Present: J.A. (Studies) (In the chair)
 Manager (Studio Operations)
 Barry Letts
 Chief Assistant (Drama) to H.Sc.Des.
 Chief Assistant (General) to H.Sc.Des. (part-time)
 Senior Vision Manager
 Assistant to H.S.N.(I)
 Drama Serials Organiser (part-time)
 A/A.P.A. Studios.

1. The purpose of the meeting was to define the method of using large studios by productions which had previously been confined to 'small' or 'medium' studios. The need for a definition arose because one of the five large T.C. studios is required, for staffing and economy-handling reasons, to be used at less than its maximum working area. The ability to 'name' four large areas from the five available has emphasized the need for a clear distinction between 'large' 'medium' and 'small' studio use.
2. A separate need for definition existed in respect of 25' serials which had previously been produced in studios D or E (when monochrome). On transfer to large T.C. studios for colour production these programmes had been requested to design 'as for Studio D' to ensure the necessary 10.30/1100 start to ensure rehearsal, though the sets could then be expected to permit improved camera positioning. The 'Studio-D-sized' definition had proved capable of widely varying interpretations:
 - interpretation which required the programme design to be capable of production in Studio D would be unacceptable to Serials Department;
 - a definition which simply required that the sets could be stood in D would usually provide room for a volume or complexity that could not be set in a large studio for an early start.

'Small' Productions

Productions such as *Man Alive*, *Money* or *Review* (which could use TC.7) will be designed to confine all camera movement and scenery within an area of 3,000 sq. feet, i.e. up to line 44 from either end of the studio.

'Medium' Productions

Productions such as *Two Pater*, which have normally used D, C or R.2., will be required to not exceed line 44 for use of a cyclorama cloth or floor painting, though camera movement could use additional space as required, line

Studio-D-Stand-Productions

Possible ways of arriving at a meaningful definition were discussed exhaustively. It was agreed that it is impracticable to test each design to see if it will, in practice, be capable of being set in D, nor is it reasonable or practicable for Service Servicing to provide exceptional examinations of such designs to ensure feasibility.

Partly for these reasons the meeting could not formulate a definition which could be applied with any prospect of success. Nevertheless, since responsibility for matching editorial and design intention with the facilities available rests with the producer and director, it was thought useful to provide a list of design characteristics affecting the probability of an easy start to camera rehearsal for a 25' aerial, whether produced as a weekly two-day stand, or on a fortnightly two-day stand.

Subsequent discussion provided the attached list of guidelines.

Agreed that the list could be a guide only and not mandatory.

The need for promulgation to designers was agreed.

ACTION: Chief Asst(Trama)
to H.Sc.Des.

cont/....

Production of 25' Serials

Production of 25' Serials on a one-day stand in large studios poses particular problems for scenic servicing and lighting departments in order to provide an early start to camera rehearsal.

The following is a list of the design characteristics that, if present, can reduce the possibility of an early start:

1. Floor painting exceeding 2,000 square feet.
2. Significant over-painting to achieve patterns, since this incurs double or treble drying time prior to setting scenery.
3. All or part of the painting required to be completed before scenery is set.
4. High scenery/handling content, including keep-sets from previous episodes.
5. Scaffolding
6. Scenery exceeding 12 feet in height, therefore requiring extra bracing.
7. Overpieces, e.g. soffits, ceiling pieces, lintels etc. which require special lighting.
8. Specially rigged cloths.
9. Grid rostra, or scenery requiring rostra to provide varied levels.
10. A total setting area (excluding camera positions) exceeding 2,500 sq. feet (The number of sets could be a factor - six sets of, say, 400 square feet each, being a reasonable average).
11. Greenery (which requires the presence of the designer).

Please note that this list is not mandatory, but non-observance can reduce the prospect of an early start to rehearsal.

Transmission: Saturday, 9th May 1970 -
Saturday, 20th June 1970 BBC-1

ALL PERSONEL WORKING ON "DR. WHO - PROJECT INFERNO"
ARE REQUESTED TO READ PAGES 3 - 4
VERY CAREFULLY.

Between 31st March and 3rd April we shall be filming at Messrs. BERRY WIGGINS of Rochester, oil refiners and manufacturers of bitumen.

Because of the extreme fire hazard, this firm enforces the most stringent fire regulations. In fact, any employee found smoking on the premises is dismissed without question.

We have secured permission to film on this excellent location, subject to the unconditional understanding that smoking is absolutely forbidden in any circumstances - except in our allocated vehicle area.

The Management have made it clear that if any member of this production unit is found smoking within the plant area, filming permission will be revoked immediately, and the whole unit will be ordered to leave the location forthwith.

I DO NOT have to stress what a tragedy this would be for the serial bearing in mind the amount of filming involved.

I would urge that all smoking materials, including matches, are left behind in transport to avoid any risk of forgetfulness.

Apples, sweets and chewing gum will be available from the two Sues, as a comfort for habitual smokers!

We must have 100% co-operation in this matter.
We cannot afford a moment's thoughtlessness.

YOU HAVE BEEN WARNED

As you will see from the location filming script and schedule we have a monumental amount to shoot in the time available - a daily average of 40-45 set-ups over a 4-day period.

If we are to complete our filming to standard, the whole operation must go like clockwork.

I must ask your fullest and most professional co-operation in carrying through our schedule.

To be blunt - no woolly thinking, no late risings, no incomprehension, no going to the wrong location etc. etc. - in fact, no hang-ups of any kind please.

We have worked out a very detailed schedule. From it you will see exactly what, when and how we will shoot. Please study the schedule carefully and work out exactly what your contribution is.

If you have any problems or are in doubt about anything at all - CONTACT ME NOW.

Contact me while there is time to sort things out and time for consultation.
DO NOT WAIT UNTIL WE GET ON LOCATION.

I am continually available either at the office -
or at home -

Once filming starts, we must go like the clappers.

Good luck.

Doug
Campbell

Notes:

1. ALL MEMBERS OF THE UNIT ARE RESPONSIBLE FOR PAYING THEIR OWN HOTEL BILLS.

Will everyone please ensure that they have enough "loot" and collect their overnight advances.
The Cashiers at TC close on Thursday, 26th March at 11.00 p.m.

2. Warm, old clothing is advisable - also old gloves for those needing to climb up and down the catwalks.

GUMBOOTS could be useful, as this is a dirty location.

3. Everyone must make certain that their shoes do NOT contain studs or steel caps/heels.
THESE ARE A POTENTIAL FIRE RISK.

SYNOPSIS OF DOCTOR WHO"INFERNO"

Serial DDD

EPISODE ONE

Drilling project to break through the earth's crust to penetrate gas pockets to provide a new source of economic energy. It is 72 hours and 18 mins. until penetration.

Sir Keith Gold (Director of Project) calls in Harry Slocum (maintenance) because of trouble with output pipe due to flange working loose at drill head.

On returning from drill head Sir Keith meets Professor Stahlman and Petra Williams (Stahlman's personal assistant). The former making it quite clear that he is in charge of all technical problems connected with the project.

Slocum receives mark on his hand from repairing the flange which seems to have changed his character. Slocum attacks Technician with wrench - killing him - on leaving the Operational Building.

The Brigadier is called in because of the killing.

The Doctor (who is down there with Liz Shaw carrying out some experiments of his own using the available nuclear power to activate the Tardis console) goes to see the Brigadier in his office, where he inspects the wrench which is still warm, hours after the murder.

Greg Sutton - a very experienced oil man arrives from Kuwait (sent for by Sir Keith) and is introduced to all at the Centre.

The Doctor returns to his hut and joins Liz carrying out experiments on the Tardis Console.

Meanwhile a soldier is killed by Slocum whilst taking part in the search for him.

Slocum goes into the Main Switch Room, he knocks the technician in there unconscious and turns the main power to FULL OUTPUT.

Intercut with this is the Doctor testing the Console which reaches danger point. During the test the Doctor is temporarily transferred to another World.

Due to the excess power which Slocum switched on, alarm bells ring as the drill is overloaded but Stahlman refuses to stop the drill. Dr. Who rushes to the drill to see what is going on. Doc guesses that whoever committed the murders is probably the cause of this. Doctor goes to Main Switch Room, Brigadier and Soldiers follow. He sees the technician on the floor and the jammed lever at FULL OUTPUT. He tries to move it as Slocum comes out of hiding and advances on the Doctor, his hands outstretched to go for the Doctor's throat.

Contd/.....

EPISODE TWO

Repeat of end of Ep. One in Switch Room.

Doctor tries talking to Slocum to calm him down.

Unit soldier attacks Slocum. Slocum is killed when the soldiers rifle goes off during the struggle. Slocum sinks to the floor screeching.

The power control lever is red hot. The Doctor uses the butt of the rifle to bring it back into position. Things calm down in Central Control and normal duties resumed.

Sutton discusses with Petra some ideas he has for greater safety at the Drill Head Area.

Slocum's body is radiating extreme heat although he is dead. Wyatt has gone zombie like.

Sir Keith tells Stahlman he wants to halt the project, as he fears the drilling may cause a volcano.

The Brigadier and The Doctor go outside onto Catwalk. Wyatt appears and attacks Doctor (he is just starting to be primeordic) Finally he falls killing himself. Technician is hiding in a corner looking green.

The technicians have scooped up some of the liquid (as from flange) and put it in a jar. The liquid is bubbling and looks alive.

Slocum's body is covered in foil and removed from the switch room.

Sutton convinces Petra that it is necessary to have coolant pipes encircling the head of the shaft linked to a cooling system in case the bore blows. She agrees to put the suggestion to Stahlman;

The computer keeps pouring out data that the drilling should stop but Stahlman refuses to take any notice of it.

Stahlman touches the glass jar and a green mark appears on his hand from it.

The Doctor is ordered off the Complex but before leaving Central Control he manages to turn on the power feed to his hut. Stahlman takes a micro-circuit from the Computer & goes to Brig. The Doctor follows Stahlman and stops him from breaking it. Office Stahlman goes back to Central Control. Doctor goes to his hut. The Computer breaks down. Liz goes to the Doctor's hut. He sends her on a wild goose chase. He switches on in the hut. The increase in power shows in Central Control. Liz and the Brigadier rush back to the hut in time to see the car, the console and the Doctor in the last stages of de-materialisation.

contd/.....

EPISODE THREE:

Repeat of end of Episode two. in Doctor's hut.

Dials show zero as Stahlman has cut off the power. Liz explains to the Brigadier that he must ask Stahlman to return the power. Brigadier puts a sentry on duty outside the hut.

Suttin has had the coolant pipes fitted in Central Control.

Stahlman refuses to have the power switched on the Doctor's hut and he accelerates the drilling programme, Sir Keith warns Stahlman that he will go to the Ministry about his decision regarding the drilling. The stain is spreading on Stahlman's hands - he now gloves

From now on in WARP 2

The Doctor wakes up in a very similar building to his hut, but everything is slightly different. There is a picture on the wall of a 'big brother' type leader.

The Doctor backs his car out of the hut and a bullet just misses him. The sentry is in a Nazi type uniform. More soldiers appear, more shots fired. Doctor races off in his car. During following attack Doctor climbs up onto catwalk, Soldier falls and Doctor encounters an infected (semi-primeordic) technician. Doctor sees Liz (again slightly different) she doesn't recognise him. The Doctor is taken to the Brigadiers (now Brigade Leader Lethbridge-Stewart) The latter now has a scar and wears an eyepatch. Brigadier starts to question the Doctor about how he got into the establishment and who he is. The Doctor tries to explain that he is from a parallel world, he persuades the Brigadier to let him see Stahlman. They go to Central Control. (Central Control is slightly different from its counterpart in Warp 1)

The Computer is defunct. Stahlman refuses to let the Doctor mend it. (All from central control in warp 1 are working here) The drilling in Warp 2 is more advanced- 3 hrs. 22mins. to penetration.

Stahlman tells the Doctor that Sir Keith Gold was killed in a car accident on his way to the Ministry. Doctor is taken back to the Brigs office.

Stahlman has had the pressure removed from the coolant pipes. In the drill head area the acceleration is showing danger level.

Stahlman's hand is now very green and long coarse hair is growing from it.

Doctor is now taken to the hut. He tries to explain the grave danger they are in without the computer's danger signals. Orders come that the Doctor is to be treated as a Class One A Security risk. Liz tells him that he will be executed.

Brigadier cannot find any trace of the Doctor at Criminal records.

Stahlman orders immediate action to be taken - ordering the Doctor to be shot. Stahlman leaves and the Brig takes the Doctor to the Security Cells.

contd/.....

A small leak appears in the Number 2 output pipe

Suddenly there is a roar and alarm bells. Sutton rushes to the Drill Head. The flange has burst, tearing jets and cables with it. With the alarm bells ringing, Brig and Liz rush to Central Control. Doctor dodges sentry when he isn't looking and hides by the defunct computer. He finds a tool bag and starts searching for a spare micro circuit.

Pressure is returned to the coolant pipes.

From the area of the flange we hear a screeching noise

Sergeant sees the Doctor searching the tool bag. Doctor demands to see Lethbridge Stewart.

The Sergeant informs the Doctor that he has had direct orders from Stahlman to shoot him at once.

EPISODE FOUR:

10.

Repeat End Of Ep. 3.

The Doctor gets the Computer working again. Eventually Stahlman agrees to reverse the systems to relieve the pressure and heat which is overpowering the drill. Stahlman orders the Doctor out of Central Control.

He is taken back to the Brigadier's office with Liz and Sergeant. Doctor tries to convince Liz there is a parallel world to Warp 2.

In Central Control by reversing the systems the pressure and heat has eased. No 2 output pipe has to be repaired and Sutton wants the revs lowered but Stahlman intends to accelerate the drilling again as soon as possible.

Meanwhile the Brigadier is interrogating the Doctor. Stahlman enters. He orders the Doctor to be shot. The Doctor asks as a last request what the matter is with Stahlman's hands. Stahlman removes the gloves and both his hands are bandaged. Stahlman refuses to believe he has been infected and the Doctor is taken to a cell. The infected Technician is huddled in the cell next to the Doctors. The Doctor tries talking to the technician - no response. When his back is turned a distorted claw covered with hair appears.

Back in Warp 1 Liz is worried about the Doctor as there is still no trace of him. They go to Central Control where final penetration is near. Stahlman is wearing gloves as in Warp 2. Sir Keith takes Stahlman on one side and explains that unless he is given certain reassurances about the drilling. Stahlman refuses, blaming Sir Keith for the interferences & delays. Sir Keith is glad he will not be there for final penetration.

In the cell in Warp 2 the technician is moaning and twisting about. Doctor calls for a sentry. Not heeding the Doctor's warning the sentry opens the cell. The technician has changed into a full primeord. he attacks the technician and throttles him. The Doctor escapes from his cell. Primeord technician tries to wrench off the door to the cell.

In Central Control penetration (Warp 2) is only 35 mins away. The Computer is still sending out warning signals. Doctor puts on disaster suit. Liz and the Brigadier enter CC.. Sergeant discovers dead sentry's body. Primeord has escaped. Stahlman hears about the Doctors escape and orders him to be shot on sight. Doctor gets into CC with the disaster suited team. The Doctor is discovered and as he is about to be shot there is a distant rumbling and screeching noise.

The final ten seconds of countdown commence and Stahlman pushes the doctor into a corner and his fingers tighten on the trigger.

Repeat off end of Ep. 4.

The Brigadier and Sutton stop fighting. All flee in terror as the Control room is filled with smoke. The noise begins to decrease. To control the emergency they have to go into the drill head. Sutton, Stahlman and the Doctor all don disaster head gear and go to the drill head.

At the drill head unconscious technicians lie around. The heat is terrific. It seems not to effect Stahlman as much as others. Sutton and the Doctor start work on the stop cock. Stahlman suddenly appears behind Sutton with a length of twisted piping. He strikes at Sutton and turns to the Doctor. With a struggle Stahlman goes for the Doctor, throttling him with super human strength.. Sutton groggily gets to his feet, grabs the piping and hits Stahlman with it.. Doc. drags Sutton away. They go to CC. The heat shield suddenly starts to descend.- released from the inside.

At the Drill head Stahlman removes his protective clothing and seems comfortable in the intense heat,

The Computer is about the only remaining apparatus left functioning. Brigadier enters reporting earth tremors in other parts of England. The Doctor tries to explain that as the energies have been released at the earths core there is no known substance to withstand the pressures and the earth will dissolve because of expanding gases at the maximum the time left is two months. Besides the gases due to the liquid from the output pipe physical and mental make-up has changed..

The half primeord technician enters staggering to the drill head. The Brigadier fires at him. He attacks the Brig who keeps firing without effect. The Doc fires an extinguisher at the tech. who now turns on the Doctor, he keeps firing the extinguisher and the tech. collapses.- dead.

The Brigadier orders no-one to leave the Complex. There is another earth tremor. The Doctor wants to try to save Earth 1. The Doc is explaining about the differences when they are summoned to CC. Stahlman is asking for the heat shield to be raised. Doctor tries to stop her. It moves a few feet and sticks. 2 Hands appear and raise the shield effortlessly. Stahlman removes his head gear and he is a full primeord. All technicians follow - also full primeords. They start to form a circle and block the exit. It is not hot enough for an attack. Sergeant fires at them. Stahlman drags his claw like hand across the Seragents face. He collapses writhing to the ground. He turns into a primeord. Doctor lowers the heat shield. The hotter it gets the powerful the primeords will become.

In Earth 1 Sir Keith has a car crash.

In Warp 2 they rush to the Brigadiers office. In the midst of a heated discussion a window smashes and a primeordic arms grabs the Doctor round the throat

The Doctor still in the Warp 2 World is trapped in the Brigadiers office with Liz, Petra, Sutton and the Brigadier.

The attacking primeord is driven off with a fire extinguisher and the Doctor explains his plan.

Using Extinguishers for defence they will fight their way into Central Control, and re-set the Master switch which controls the power from the Nuclear reactor, which is still functioning on robot control. Then they will make their way to the nuclear switch room, and boost the power from the reactor so that the doctor can tap it and use it to reactivate the Tardis console. There is just a chance he will be able to return to 'our' planet (Earth) and ward them off the dangers they face.

The first part of the plan is successful. The Brig and the two girls wait outside Central Control while the Doctor works on the Master Switch, guarded by Sutton, who is warding off the creatures with a hose connected to his coolant supply, which acts as a giant extinguisher.

Then they all make their way to the Main Switch of the Nuclear Reactor. Sutton and the Doctor go off to lay a power cable to the Tardis console while Liz and the Brig watch as Petra works on the Nuclear Reactor. But before she can finish completely all three are driven away by a primeord. The temperature is now high enough for the for the creatures to venture out of Movement Control.

Liz, Petra and the Brig join the Doctor and Sutton who have succeeded in connecting the cable from a nearby power point to the Tardis. But the power isn't getting through. Back in the main Switch Room a Primeord collapses against the control panel and somehow jolts it into motion.

Power is coming through and it seems as though the Doctor has a chance of escape. But the Brigadier draws his revolver and insists that they all leave with the Tardis, ignoring the Doctor's explanations that this would cause a space-time paradox that might destroy the continuum itself. Liz picks it up and turns it on the Brigadier.

The Doctor works frantically to activate the Tardis. But it seems he is too late. There is a final series of explosions as the drill head shaft splits. Through the open door they see a wall of lava advancing towards them.

EPISODE SEVEN:

13.

The Doctor manages to reactivate the Console just before the wall of lava engulfs the hut in Warp 2. The Tardis console, with Doctor and car materialises in World 1 'our' world before an ashtonished Liz. But the Doctor is unconcious, in a deep coma.

Stahlman meanwhile continues as dictatorial as ever in this world, seemingly obsessed with the need to accelerate the drilling and break through the earth's crust.

There is an emergency at the drill head which exactly duplicates that on the Warp 2 world.

advice from the Doctor enables it to be solved in the same unorthodox way, by reversing all systems and reversing the vortex of the drilling. But the Doctor realises that unless he can prevent it, events will move inexorably towards the terrific climax that has destroyed the Warp 2 world.

He goes to Central Control and appeals to Stahlman to stop the drilling. When this is ignored the Doctor desperately tries to halt the drilling by force but is lead off a prisoner by Unit guards. Sir Keith Gold has returned to the Complex, despite Stahlman's plot to delay him, with an order from the Minister that there shall be a full inquiry into Stahlman's conduct of the project. But Stahlman turns a blind eye and refuses to report to the Minister. It seems that nothing can be done - and the moment of final penetration is very near.

The Doctor escapes from his guards and returns to Central Control to find that Stahlman has expelled all technicians from the drill head area, lowered the heat shield and locked himself in. The Doctor tries to persuade Sir Keith to stop the drilling, is still too dominated by Stahlman to agree.

Suddenly the drill head shield is raised and Stahlman appears. In the heat of the drill head he has changed to a full primeord like the hideous creatures in the Warp 2 world.

Stahlman is destroyed by a combined attack with fire extinguishers by the Doctor and Sutton. With seconds to spare they manage to stop the drilling. Penetration of the earth's crust is avoided and the world is saved.

The Project is closed down, and the Doctor is greatly relieved until he realises that the Nuclear Reactor will also close down. depriving him of his power source for the Tardis.

MONDAY, 30th March 1970 - TRAVEL DAY ONLY

The following people to be at TC Reception at 3.45 p.m. to board Coach;

Christine Rawlins (WR)
 + Jean Ellis + ~~Tom~~ *Tomy* Styles, Pat Trigger.
 Marion Richards (MU)
 + Irena Walls, Sue Duckworth, Judy Cain
 John Levene
 David Simeon
 Ian Fairbairn
 (Jon Pertwee
 Caroline John)

The following people travelling in own cars to hotels in Rochester:

Derek Ware
 Roy Scammell
 Alan Chuntz
 Terry Walsh
 Roy Street
 Marc Boyle
 Billy Horrigan

Chris D'Oyly-John
 Sue Upton
 Sue Hedden

TRANSPORT:

40 seater coach at TC Reception
 at 3.30 p.m. to be loaded with Make-up
 and Wardrobe equipment and artists.
 To leave at 4.00 p.m. for Rochester

PROPS:

2 men and 5 ton van at Movement Control
 at 2.30 p.m. to load props, scenery
 and depart at 3.00 p.m.

DIRECTIONS TO HOTELS, ROCHESTER.

From TC - over Putney Bridge
L. along Putney Bridge Road and into Wandsworth
one-way system.

Follow South Circular Road until it splits with
A.2.
Follow A.2 - Rochester Road.

Once on A2/M2 dual carriage way -
look out for major L. FORK (at Medway Towns BYPASS)
which is signposted "A2. ROCHESTER-STROOD"
Take this down to the bridge and go over.

Once over the Bridge, follow One-way system
and turn 1st R. and 1st R. again at traffic lights.

The Hotel will be on your left.

ACCOMMODATION

EPISODE 1 - All Warp I

Slate	Shot	Script Ref.	Description	Notes
1/1 102	TK 1-1	I-1	<u>GATES AREA</u> BCU DOCTOR driving car L to R. singing an excerpt from opera at top of his voice. (Camera in passenger seat)	DOCTOR + Car <u>Song Cont.</u>
2/1	1-2	I-1	VLS ROAD by Refinery. CAR drives into shot with the DOCTOR still singing on the clear morning air. PAN CAR R to L to reveal refinery works. HOLD FRAME at road junction for incoming cut. He finishes song <u>before</u> junction.	" <u>Song Cont.</u>
3/3	1-3	I-1	LS ROAD JUNCTION. CAR turns corner with the DOCTOR having finished his song. PAN him past Security Hut as he waves to the SECURITY MEN, and the gate is raised. PAN on to full-frame of sign. "Restricted Area" Keep Out	" + SIGN

Slate	Shot	Script Ref.	Description	Notes
94/1	TK 1A-1	I-2	<u>COMPLEX AREA: R 201</u> CU HARRY SLOCUM cycling along whistling, moving from L to R. Shot is an echo of 1 -1 <u>Camera in rear of tracking Cam. car)</u>	SLOCUM + Bike, Toolbox <u>Shoot MUTE</u> + record whistling track Erect <u>DOOR/NOTICE</u>
95/2	1A-2	"	LS PANNING shot of SLOCUM on bike, whistling. He is moving L to R. We PAN him pas "Rail Area". He dismounts, parks his bike, detaches his toolbox, and moves towards camera. BROMLEY X's from R into M2-s. <u>SLOCUM: (Friendly)</u> Hello, John. How's it going in there? <u>BROMLEY:</u> Still drilling away like mad <u>SLOCUM:</u> Sounds like the dentist! <u>BROMLEY:</u> (GRINS) Yeh. You could say that ... Let BROMLEY go and hold on. SLOCUM to bunker entrance. PAN on to full-frame of notice.	SLOCUM BROMLEY + Bike Toolbox DOOR + Notice

Slate	Shot	Script Ref.	Description	Notes
96/3	TK 2-1	I-9	<u>COMPLEX AREA: R 201</u> Side MS BUNKER ENTRANCE. SLOCUM emerges, carrying wrench. He is walking as though in a dream. PAN him L to R into LS.	SLOCUM <u>Wrench Cont.</u>
103/3	2-2	"	<u>Hand-held Cam.</u> TRACKING MCU SLOCUM staggering along. He is gripped by an awful agony. His face twists into an awful grimace. He puts his hands up to his temples. (If WRENCH allows - otherwise left hand only) He is trying to fight the "alien" take-over but he is losing. We PAN him R as he stumbles towards the iron steps.	SLOCUM <u>Hand/Wrench Cont.</u>
97/3	2-3	"	CMS IRON STEPS. SLOCUM enters shot and collapses against them. His agony increased. The take-over is almost complete.	SLOCUM <u>Hand/Wrench Cont.</u>
Extra Shot 104/1	2-3A	"	Ch Slocum falls L on iron rail Pan L to R to step	
100/3 100/1	2-4	"	CMS WINDOW of HUT, close to Complex and Iron steps. TECHNICIAN looks up and spots OOV SLOCUM. He moves to door.	TECHNICIAN

Slate	Shot	Script Ref.	Description	Notes
101/2	TK 2-5	I-9	<p>MLS HUT. TECHNICIAN emerges. We PAN him R to L to SLOCUM. He thinks SLOCUM has been taken ill. He moves into L2-s with SLOCUM.</p> <p>As he touches him, SLOCUM turns and swipes savagely at him. The TECHNICIAN takes a step back.</p> <p>NB: <u>End PAN</u> before TECHNICIAN's arrival.</p>	<p>TECHNICIAN SLOCUM</p> <p><u>Slocum's Cont.</u></p> <p>Wrench</p>
108/3	2-6	"	<p>CMS SLOCUM collapsed against steps. TECHNICIAN enters R frame, and touches SLOCUM. Savage swipe as before.</p> <p>HOLD on SLOCUM, WHIP-PAN him as he lunges fwd. and hurls the TECHNICIAN to ground - oov.</p> <p>HOLD on SLOCUM, his face twisted with inexplicable fury.</p>	<p>SLOCUM TECHNICIAN</p> <p><u>Slocum's Cont.</u></p> <p>Wrench</p>
102/3	2-7	"	<p>H/A TECHNICIAN hurled into shot on ground. He looks up fearful - no hamming please!</p>	<p>TECHNICIAN SLOCUM</p> <p>Wrench</p>
99/1	2-8	"	<p>L/A TECHNICIAN's POV. CS SLOCUM. He raised wrench and strikes into camera with savage fury.</p>	<p>SLOCUM + Wrench <u>RECORD SCREAM</u></p>
↓	2-9	"	<p>Side Angle CU. SLOCUM rises into pre-focused set-up from first blow, pauses a beat and strikes again. There is the glare of madness in his eyes.</p>	<p>SLOCUM Wrench</p>

Slate	Shot	Script Ref.	Description	Notes
153	TK 3-1	I-23	<u>DOCTOR'S HUT AREA</u> (<u>WARP I</u>) MLS DOCTOR driving car across tarmac towards camera. It is a "character entrance" after a biting tagline from STAHLMAN - so flamboyantly fast!	DOCTOR + Car
157	3-2	"	MLS DOCTOR'S HUT. A UNIT SENTRY (LATIMER) is patrolling across in front of the hut, when he reacts to the advancing DOCTOR. He X's R and exits to meet him. He enjoys his exchanges with the DOCTOR	LATIMER
154	3-3	"	LS DOCTOR approaching in car. UNIT SENTRY enters L. DOCTOR drives up and stops. <u>LATIMER</u> : (CHEERFUL) Morning, sir. <u>DOCTOR</u> : Hello. Any sign of Slocum, yet? <u>LATIMER</u> : No. We're still searching for him. <u>DOCTOR</u> : (HEAD TURN) Rather a nasty business ...	DOCTOR LATIMER Car
158	3-4	"	CU DOCTOR <u>DOCTOR</u> : (HEAD TURN Towards LATIMER) Rather a nasty business ...	DOCTOR

Slate	Shot	Script Ref.	Description	Notes
155/2	TK 3-5	I-23	CU LATIMER. <u>LATIMER</u> : Yes. (SLY GRIN) Still, you should be safe in there. I'm sure this Harry Slocum won't have one of your funny gadgets!	LATIMER
158/2	3-6	"	CU DOCTOR <u>DOCTOR</u> (MOCK ANNOYED) Funny gadgets! He turns away and reaches into his pocket.	DOCTOR + Car
156/5	3-7	"	<i>TILT UP from DOCTOR as D^r</i> <i>takes device out to</i> M2-S LATIMER/DOCTOR <u>DOCTOR</u> : Funny gadgets! He turns away and reaches into his pocket and produces an electronic door-opening device, which he holds up and presses.	DOCTOR LATIMER + Gadget Car <u>DUB SOUND</u> <u>of Device</u>
160/1	3-8	"	<u>Camera inside Garage Doors</u> DOORS open smoothly to reveal LATIMER/DOCTOR + Car. DOCTOR still has device held up. DOCTOR turns to amused SENTRY. <u>DOCTOR</u> : (DEADPAN) It's only a door-handle.	"

Slate	Shot	Script Ref.	Description	Notes
159/3	TK 3-9	I-23	<p>MCU DOCTOR.</p> <p><u>DOCTOR:</u> (TURNS TO SENTRY) It's only a door-handle.</p> <p>As DOCTOR drives off, PAN to MCU SENTRY, who moves u/s to overcome Continuity problems in studio.</p> <p>SENTRY looks after OOV DOCTOR with great amusement.</p>	<p>a/b</p> <p>CAR now rope-hauled to avoid fire hazard.</p>
	3X-1	"	<p><u>OSO BACKING FOR USE IN STUDIO</u></p>	

Slate	Shot	Script Ref.	Description	Notes
	TK 4-1	I-27	<u>BALLOON HUTS/WASTEGROUND AREA</u> VLS UNIT SOLDIERS covering ground and moving R to L. SGT. BENTON enters f/g from R, stops and looks at them.	UNIT SOLDIERS BENTON
	4-2	"	L/A CU BENTON. <u>BENTON:</u> (SHOUTING) Come on! Spread out a bit more! There's a lot of ground to cover!	BENTON
	4-3	"	<u>BENTON'S POV:</u> VLS SOLDIERS. One raises his arm in acknowledgement and they fan out.	UNIT SOLDIERS
	4-4	"	<u>Resume 4-2:</u> CU BENTON. Satisfied, he watches for a moment then turns and leaves frame.	BENTON

Slate	Shot	Script Ref.	Description	Notes
	TK 4-5	I-27	L/A LS BENTON trides fwd. into MCU. <u>(Angle to avoid seeing other TROOPS)</u> <u>BENTON:</u> (SHOUTING) Hey, Collins! Anyone else on your flank?	BENTON
	4-6	I-27	<u>BENTON'S POV.</u> VLS SOLDIER coming up towards ruined building. He waves an arm to show "negative" or shouts back: "No, Sgt.!"	VICTIM SOLDIER
	4-7	"	<u>RESUME 4-5:</u> BENTON <u>BENTON:</u> (SHOUTING) Check out those buildings, I'll see you on the far side!	BENTON
	4-8	"	<u>RESUME 4-6:</u> VLS SOLDIER He either oknowledges visually or shouts, "Right, Sgt.!"	VICTIM SOLDIER
	4-9	"	<u>RESUME 4-7:</u> CU BENTON <u>BENTON:</u> (SHOUTING) And keep your eyes peeled! He moves off and we PAN him L, and see other searching soldiers in b/g.	BENTON

Slate	Shot	Script Ref.	Description	Notes
	TK 4-10	I-27	<p>IS SIDE of BUILDING. SOLDIER appears around corner. We follow him to ruined building entrance. He goes in, rifle at the ready.</p>	VICTIM SOLDIER
	4-11	"	<p>ENTRANCE to Ruined BUILDING. SOLDIER enters.</p> <p>We TIGHTEN on him as he looks into gloom.</p> <p>Suddenly SLOCUM rises behind like a Fiend from Hell and puts a hairy hand around his throat - a grip of steel.</p> <p>SOLDIER struggles uselessly, dropping his rifle.</p> <p>SLOCUM yanks him down out of shot.</p>	VICTIM SOLDIER SLOCUM

Slate	Shot	Script Ref.	Description	Notes
	TK 5-1	I-28	<p><u>NUCLEAR REACTOR AREA</u></p> <p>H/A MS shooting under "mini-red tank".</p> <p><i>Slocum hand round tank</i></p> <p>See PUFF appear. As they hobble R to L, they motivate a</p> <p>TILT and ZOOM BACK to reveal SLOCUM. He leaves frame L.</p>	<p>SLOCUM</p> <p>+</p> <p>Supply wet rags to wipe of abgan off tank.</p>
	5-2	"	<p>LS MINI-RED TANK.</p> <p>SLOCUM advances quickly with a surange hobbling gate.</p> <p>We PAN him to doors which he pulls open and shuts again. As he shuts sliding door, action motivates a ZOOM IN to see SIGN: "NUCLEAR REACTOR SWITCHROOM"</p>	<p>SLOCUM</p> <p>+</p> <p>Sign</p>

Slate	Shot	Script Ref.	Description	Notes.
174/204	TK 14-1	II-17	<p><u>CATWALK AREA "A"</u></p> <p>MLS BRIGADIER/DOCTOR climb up ladder into shot. They move downwards towards camera. BRIGADIER f/g R - DOCTOR f/g L</p> <p>BRIGADIER: (GLAD TO GET INTO FRESH AIR) I shouldn't like to go through that again.</p> <p>DOCTOR: No. Not at all pleasant.</p> <p><u>BRIGADIER: Look, I'd like some answers, Doctor. What <u>did</u> happen to Slocum?</u></p> <p><u>DOCTOR: Some sort of retrogression of the body cells.</u></p> <p><u>BRIGADIER: I don't understand.</u></p> <p><u>DOCTOR: Neither do I - not fully. Not yet.</u></p> <p><u>BRIGADIER: (HEAD TURN)</u> It looked as if he was turning into some sort of animal.</p>	DOCTOR BRIGADIER
178/2	TK 14-2	"	<p>CU BRIGADIER</p> <p><u>BRIGADIER: (HEAD TURN)</u> It looked as if he was turning into some sort of animal.</p>	BRIGADIER

Slate	Shot	Script Ref.	Description	Notes
176/2	TK 14-3	II-17	<p><u>MS DOCTOR.</u> He moves L on speech, along CATWALK T-Junction.</p> <p><u>DOCTOR:</u> Yes. But the process was relatively slow. And it wasn't completed</p> <p><u>BRIGADIER:</u> (OOV) I'm going to have a devil of a job keeping this quiet.</p> <p><u>DOCTOR:</u> (DEEP IN HIS OWN THOUGHTS) But why wasn't the metamorphis completed?</p>	DOCTOR BRIGADIER (oov)
179/1	TK 14-4	"	<p><u>MCU BRIGADIER</u></p> <p><u>BRIGADIER:</u> That screeching noise ... Have you ever heard anything like it before?</p>	BRIGADIER
177/2 & 3	TK 14-5	"	<p><u>MCU DOCTOR</u></p> <p><u>DOCTOR:</u> (LOOKS TOWARDS OOV. BRIG) Something rather like it. Much louder, of course - but basically the same noise.</p> <p><u>BRIGADIER:</u> (OOV) Where?</p> <p><u>DOCTOR:</u> Krakatoa - in the Sundra Straits during the volcanic emphasis 1883</p>	DOCTOR BRIGADIER (oov)

Slate	Shot	Script Ref.	Description	Notes
	TK 14-6	II-17	CU BRIGADIER <u>BRIGADIER:</u> Krakatoa?	BRIGADIER
	TK 14-7	"	CU DOCTOR DOCTOR: In 1883, as I recall, I visited the area in the Tardis when the island was erupting. As the volcano exploded the air was rent with that screeching noise.	DOCTOR
18/1	TK 14-8	"	CU BRIGADIER <u>BRIGADIER:</u> Are you ^{helligme} suggesting that there's some link between Slocum and the eruption of Krakatoa?	BRIGADIER
177/23	TK 14-9	"	<u>CU DOCTOR</u> DOCTOR: There could be. <i>looks out to Barton (boy)</i>	DOCTOR
180/1	TK 14-10	"	CU BRIGADIER He reacts then turns and looks to his right, on boat clatter.	BRIGADIER

Slate	Shot	Script Ref.	Description	Notes
175/203	TK 14-11	II-17	<p>MLS STAIRS. SGT. BENTON appears</p> <p>PULL BACK on his approach to reveal BRIGADIER f/g R.</p> <p><u>BENTON:</u> (BREATHLESS) Sir. Wyatt and the technician. They've disappeared.</p> <p><u>BRIGADIER:</u> What do you mean ..?</p> <p><u>BENTON:</u> Cleared off, sir, before the Medics could look at them. I thought they were too ill to move ...</p> <p><u>DOCTOR:</u> (ENTERING for C3-s) I think you'd better find them quickly.</p> <p><u>BRIGADIER:</u> (TO BENTON) Come on!</p> <p>BRIGADIER/BENTON race off. HOLD on DOCTOR X'ing R in f/g.</p>	<p>DOCTOR BRIGADIER BENTON</p> <p><u>Cont. at end of shot.</u></p>
58/2	TK 14-12	"	<p>L/A Shooting up CATWALK "A"</p> <p>BENTON/BRIGADIER appear in shot and clatter down iron steps as fast as possible.</p> <p>PAN them past camera and out R.</p> <p>(BUFFER SHOT: To get them away from DOCTOR to make following sequence make sense)</p>	<p>BRIGADIER LENTON DOCTOR</p>
182/2	TK 14-13	"	<p>MCU DOCTOR, looking out deep in thought. He turns around and happens to look upwards.</p>	<p>DOCTOR</p>

Slate	Shot	Script Ref.	Description	Notes
56/1	TK 14-14	II-17	L/A POV. LS High up on CATWALK, we see WYATT silloutted against the sky. He has a strange ape-like stance. He holds rifle in one hand. We cannot make out his face.	WYATT + Rifle
182/2	TK 14-15	"	<u>RESUME MCU DOCTOR (14-13)</u> <u>DOCTOR: (SHOUTING) Hey!</u> <u>Wyatt? Want!</u>	DOCTOR
50/1	TK 14-16	"	<u>RESUME L/A POV. (14-14)</u> WYATT, startled, turns and moves off quickly with an ape-like, hobbling gate. He trails his rifle like a club.	WYATT + Rifle
55/1 + Reshoot 183/1	TK 14-17	"	H/A Shooting down through Ladder protector. DOCTOR looking up. He moves to end of Catwalk to see if the Brigadier is still in sight, then returns and starts to climb ladder.	DOCTOR

Slate	Shot	Script Ref.	Description	Notes
53/5	TK 14-18	II-17	L/A MCS CATWALK. WYATT's booted FEET enter shot. He is trailing rifle. He moves fast but it is a kind of hobble. (REASON: His mutating feet are finding it a hard squeeze in Army Boots) He moves from R to L.	WYATT
54/2	TK 14-19	"	IS TOP of LADDER PROTECTOR. DOCTOR appears and runs fwd. exiting L.	DOCTOR
59/2	TK 14-20	"	L/A VLS CATWALK. WYATT appears R and we PAN him as he runs R to L and he disappears. (Shoot to avoid R end of CATWALK)	WYATT
50/1	TK 14-21	"	ZOOMED VERSION of 14-20. DOCTOR appears. We PAN him R to L and he disappears. (FRAMING as above.)	DOCTOR

Slate	Shot	Script Ref.	Description	Notes
44/1	TK 14A-1	II-17	<u>CATWALK "C" (SMALL FALL AREA)</u> L/A Shooting up, from R, LADDER. DOCTOR runs into shot and looks down. He starts to climb down ladder. <i>Slide</i>	DOCTOR
46/2	TK 14A-2	"	MS Bottom of LADDER with Small TANK f/g. DOCTOR climbs into shot. He reacts to seeing WYATT (OOV)	DOCTOR

DOCTOR WHO

Hugh Wilson.

7th April, 1970

I should be grateful if you would arrange with Colin Fisher for camera mountings to be fixed on the "Dr. Who" car as discussed on the phone with John Oaten.

Many thanks,

A handwritten signature in dark ink, appearing to read 'Sandra Brenholz'. The signature is stylized with a large, sweeping flourish that extends downwards and to the right, ending in a long, thin line.

(Sandra Brenholz)

PROPERTY COSTING ON SERIAL "DDD" DOCTOR WHO.

Organiser, Drama Serials Tel.

To confirm our conversation, this is the situation at the moment. Just over a week ago, Jeremy Davies, the designer of serial "DDD" was told that the decision had been made to classify computers, control panels and so on specially built for "Doctor Who" as props rather than scenery. This of course means that they attract the A. & H. levy on internal costs, and as they are inevitably expensive items, a levy of 150% becomes extremely onerous.

In the case of serial 'DDD' the external cost of these items is £236, so the levy is £1407.

Is there anything we can do about this?

(Barry Letts)

Subject: DR. WHO DDD - MAKE-UP COSTS

Copies to: Make-up Manager
Mrs. M. Richards.

To: Mr. B. Letts

Further to our recent telephone conversation, below are the costs of the items ordered by Marion Richards for the "Dr. Who DDD" series.

Marion warned the Director that the items he required would be costly, but he replied "that it had to look right". He could not let her know the make-up budget for the series, so she economised as much as possible.

Unfortunately, she ordered 3 full primords too many, as at the planning meeting she understood that number would be required. It was not until the scripts were finalised that she realised the requirements had been altered, when it was too late to amend the order.

I understand you have allowed £600 on the P.B.E.'s for make-up items. If you can help by increasing our external cost allowance it would be greatly appreciated.

	<u>£ EACH</u>	<u>£ TOTAL</u>
9 False latex noses & mouths	15.15.0.	141.15.0.

'INFERNO'

EPISODE ONE:

An apparently motiveless murder brings the Brigadier to the 'Inferno' - a terrifying project to drill to the centre of the Earth. The Doctor and Liz are already there as observers - but the Doctor has plans for a dangerous experiment of his own.

EPISODE TWO:

The Doctor is the victim of a savage attack. His quarrel with Professor Stahlman comes to a head and the Doctor makes a desperate and dangerous attempt to re-activate the Tardis console.

EPISODE THREE:

The Doctor's attempt to re-activate the Tardis console hurls him into a terrifying situation where old friends seem deadly enemies - even Liz and the Brigadier.

EPISODE FOUR:

The Doctor fights to survive in a frighteningly different duplicate world. Stahlman orders that the Doctor shot on sight.....

← shall be

EPISODE FIVE:

In the parallel world Earth's crust is finally penetrated - and the results are even more horrifying than the Doctor had feared. He is trapped in a world that seems doomed.

EPISODE SIX:

Powerless to save the parallel world in which he is trapped, the Doctor fights to re-activate the Tardis console and return to 'our' world - before it is too late.

EPISODE SEVEN:

The Doctor returns to 'our' world only to see the same terrifying pattern of events repeat itself - and no-one will listen to his warnings.

PROMOTION

DOCTOR WHO: BBC-1
COLOUR

"DOCTOR WHO"

"PROJECT INFERNO"

by

DON HOUGHTON

(SERIAL DDD)

TRANSMISSION:

9th MAY 1970

UNTIL:

20th JUNE, 1970

SELLING POINTS:

- (1) An exciting story linked to the real life present day Mobile Projects.
- (2) Dual roles for Liz Shaw and the Brigadier, as ruthless officials of a totalitarian British Republic in a strange parallel world.
- (3) The terrifying Primords - men degenerated into a primaeval ape.
- (4) The destruction of a planet by a tremendous volcanic eruption.

The Doctor attends a top secret drilling project, the purpose of which is to penetrate the Earth's crust and tap the new energy source of Stahlman's Gas which Professor Stahlman, instigator of the project, believes to lie below. Stahlman, a ruthless ego-maniac is at odds with Sir Keith Gold, Executive Director of the project, who urges a more cautious approach to the drilling.

Continued/

Continued:

Beneath his pose of interested observer, the Doctor is anxious to tap the nuclear power of the project as part of his plan to get the grounded Tardis operational once more. His attempt to do this projects him into a parallel world, a semi-fascist Britain in which he meets a very different Liz and Brigadier. In this world too the Project Inferno is nearing completion as the penetration of the Earth's crust unleashes primitive forces that will eventually destroy this parallel world - first the terrifying Primords - men degenerated by the released Stahlman's gas, into a kind of primaeval ape - then an immense volcanic eruption that will eventually destroy the planet. Before the final catastrophe the Doctor manages to project himself back into 'our' world, where to his horror, he finds that the Project Inferno is nearing the final stage under the ruthless driving of Professor Stahlman.

Desperately the Doctor struggles to prevent a repetition of the catastrophe which has destroyed the strange parallel world.

We agreed, when discussing the two in one recording arrangements for 25: Serials, to meet again and discuss the experience of Dr Who DDD and Black Tulip.

I shall be grateful if you could meet me as soon as possible while reactions are fresh so that any lessons learned can be applied to further planning.

My secretary will be contacting you to arrange a short meeting and I shall be grateful if you would come armed with comments and advice.

Org. Serials Drama (3)

RM8

In connection with the meeting you have proposed to discuss two in one recordings, the comments below from the Designers on Dr. Who DDD and The Black Tulip will be of use to you at the discussion.

THE BLACK TULIP: PETER KINDRED

1. Much more time available for breaking down property lists with the Property Assistant. Likewise more time available for supervising scenery construction and attending outside rehearsals.
2. The wear and tear on retaining sets is theoretically halved owing to two episodes being in the studio at once; in other words less handling by scene crews.

(In connection with item (1) above: The Designer of 'Roads to Freedom', Spencer Chapman, reports that with this weekly strike he has not enough time to break down property lists, hire furniture and props, visit rehearsals etc., even though the strike is 5 episodes, a month's filming, then 4 episodes etc. Serious consideration will have to be given to this problem in any future weekly strike serial exceeding 6 episodes. This is outside the context of this particular meeting but one feels it should be mentioned)

DR. WHO DDD: JEREMY DAVIES

This Designer affirms the conclusions of Peter Kindred as above.

He also points out that if rehearsals are scheduled to commence before 1300 hours and if no day set and light is possible, recording an episode on day one would revert to the unsatisfactory conditions existing previously. (The answer to this, of course, is implicit in the safeguards agreed recently by Serials and Servicing Departments)

Scenic Design Manager comments generally that from our side the system seems to be working well.

Subject: OVERRUNS ON DR. WHO DDD: VTR, 21/22.5.70

To: H.Serials D.Tel.

Copy to: D.O.O.Tel.

The overruns on Dr. Who DDD, episodes 5 and 6, recorded on 21/22.5.70 were due in the final analysis to my having had to take over, during the rehearsal period, two extremely complex camera scripts from the Director, who was ill.

Two comments may be relevant. On the 21st, at least thirteen and a half minutes was due to technical trouble with VTR. On the 22nd, we were able to break the studio at the proper time, confining the overrun to the Gallery, while we recorded telecine.

Don Houghton, Esq.,

Dear Don,

I think the enclosed letters are self-explanatory. Jon passed them on to me, with the note, "when you have read them would you please pass them on to Don Houghton as I am sure she would appreciate a short answer from the writer of 'Inferno'."

I hope all goes well with 'The Flaxion Boys' - and with 'Doombox' (!!)

All the best,

(Barry Letts)

My Dear Barry,

Just thought I'd drop the enclosed note of appreciation to Doug Camfield (copy enclosed). If you approve could you send it on to him for me? Don't know his address.

The same sentiments contained in the letter apply to you and Terrance, of course - but my thanks to you both can be relayed personally.

Cheers

Don H.

From DON HOUGHTON.

Copy:

23rd June, 1970.

Doug Camfield, Esq.,
c/o Barry Letts,
'Dr Who' Production Office,
BBC-TV, Union House,
Shepherd's Bush,
London W 12.

My Dear Doug,

Just a very brief note of appreciation for the wonderful job you did on 'Inferno'. It's not often these days that a writer can see his work interpreted with such care and imagination. During these past few weeks I have had many pleasant remarks relayed to me about the show - and I have had the pleasure of pointing out your own great and invaluable contribution.

I, like everyone else involved in the show, was most upset when your illness precluded you from being in the box for the last few eps. But I know Barry would be the first to join me in saying that 'Inferno' was your concept - and any success it may have enjoyed was due, in no small measure, to your initial work and talent.

Again, very many sincere thanks for everything you did - and I do hope that I have the pleasure of working with you again one day. In the meantime, I hope this letter finds you once again in the very best of health.

Cheers,

Don Houghton.

DH:jb.
